

FAQ Assistant API

Project Demonstration Phase Document

Item	Details
Project Name	FAQ Assistant API
Document	Demonstration Phase (Demo Plan)
Version	1.0 (Draft)
Phase	Demonstration
Status	For review

1. Introduction

This document describes how the FAQ Assistant API will be demonstrated to the project owner, guide and other stakeholders. It explains the goal of the demo, the audience, the setup, a step-by-step demo flow, the roles of team members, the backup plan and how feedback will be collected.

2. Demonstration Objectives

- Show that the API meets the requirements and works end to end.
- Present the main value of the project: instant and accurate answers to user questions.
- Show how admins manage FAQ content without code changes.
- Show security, error handling and performance in a simple way.
- Collect feedback and get approval for release.

3. Audience

Audience	What They Want to See
Project owner / guide	Requirements met, quality of work, final approval
Client app developers	How easy it is to integrate and read responses
Admins / support team	How simple it is to add and update FAQs
Technical reviewers	Architecture, code quality, tests, security

4. Demo Plan and Duration

The demo is planned for about 20 minutes plus 10 minutes for questions.

Time	Segment	Presenter
0 - 2 min	Introduction: problem, objective and solution overview	Team lead
2 - 4 min	Architecture and technology stack overview	Backend developer
4 - 9 min	Live demo: asking questions through the API	Backend developer
9 - 13 min	Live demo: admin managing FAQs	Backend developer
13 - 16 min	Security, error handling, feedback and logging	Tester / QA
16 - 18 min	Test results and performance summary	Tester / QA
18 - 20 min	Conclusion, future scope and next steps	Team lead
20 - 30 min	Questions and feedback	Whole team

5. Demo Environment and Setup

Item	Details
Server	Deployed test / staging server (local Docker setup as backup)
Client tools	Postman collection and Swagger UI in the browser
Sample client	Simple web page or chatbot screen calling the API (optional)
Data	Prepared set of FAQs across at least 3 categories
Keys	One admin token and one normal API key ready to use
Screen setup	Large font in terminal / Postman, projector or screen share tested

5.1 Pre-Demo Checklist

- API server is running and the /health endpoint returns OK.
- Database has the demo FAQs and is backed up.
- Postman collection is imported and tokens are working.
- Internet, power and projector are checked at least 30 minutes before.
- Slides, demo video and this script are open and ready.
- Notifications are turned off on the presenting laptop.

6. Demo Scenarios

Each scenario below is shown in order. The expected result is what the audience should see.

No.	Scenario	Steps	Expected Result
1	Health check	Call GET /health	200 OK, service running
2	Exact question	POST /ask: How do I reset my password?	Correct answer with high confidence score
3	Reworded question	POST /ask: I forgot my password, what now?	Same FAQ returned, showing smart matching
4	Misspelled question	POST /ask: how to reest pasword	Correct FAQ still matched
5	Unrelated question	POST /ask: What is the weather today?	Polite fallback, logged as unanswered
6	Add new FAQ (admin)	POST /faqs with admin token	201 Created
7	Ask the new FAQ	POST /ask with the new question	New answer returned immediately
8	Update and delete FAQ	PUT and DELETE on the FAQ	Answer changes, then FAQ is gone
9	Unanswered questions	GET /unanswered as admin	Scenario 5 question is listed for review
10	Feedback	POST /feedback with helpful flag	Feedback stored

No.	Scenario	Steps	Expected Result
11	Security check	Call POST /faqs without token	401 Unauthorized
12	Rate limiting	Send many quick requests	429 Too Many Requests

7. Roles and Responsibilities

Role	Responsibility During Demo
Presenter (Team lead)	Opens and closes the demo, explains the value and future scope
Technical presenter	Runs the live scenarios and explains the design
QA presenter	Shows test coverage, security and performance results
Support member	Watches the time, handles technical problems and notes feedback

8. Backup Plan

Possible Problem	Backup Action
No internet or server down	Switch to the local Docker setup on the laptop
Live demo fails	Play the pre-recorded demo video and explain the steps
Postman or token issue	Use Swagger UI or the saved cURL commands
Projector or screen problem	Use a second laptop or share screen online
Running out of time	Skip scenarios 8 and 12, mention them in the summary

9. Expected Questions and Answers

Question	Prepared Answer
How accurate is the matching?	Show the accuracy test result on the 50-question test set and explain the threshold.
What if there is no matching FAQ?	The API returns a fallback message and logs the question so admins can add an FAQ.
How is the API protected?	Token authentication for admin actions, input validation and rate limiting.
Can it handle many users?	Explain the load test results and that caching and scaling are possible.
How can a client app integrate it?	Show the integration guide and the sample request in Postman.
What can be improved in future?	Multi-language support, admin dashboard, analytics, live-agent handover.

10. Feedback Collection

After the demo, feedback will be collected in a simple form. Each point is rated from 1 (poor) to 5 (excellent).

Criteria	Rating (1-5)	Comments
Meets the requirements		
Accuracy of answers		
Ease of use for admins		
Ease of integration (API and docs)		
Security and error handling		
Overall quality of the presentation		

11. Success Criteria

- All planned scenarios run without critical failure.
- Audience understands the purpose and working of the API.
- Feedback is positive and no major change requests are raised.
- Project owner approves the API for release.

12. Deliverables

- Presentation slides and the demo script.
- Recorded demo video as backup and for future reference.
- Postman collection with demo requests.
- Completed feedback forms and a short demo summary.

13. Risks and Mitigation

Risk	Mitigation
Live technical failure	Rehearse twice, keep local setup and recorded video ready
Demo runs too long	Practise with a timer and mark optional scenarios
Team members unsure of their part	Assign roles clearly and hold a full rehearsal
Unexpected questions	Prepare Q and A list and note unanswered points for follow-up

14. Post-Demo Actions

- Share the slides, recording and documents with stakeholders.
- List all feedback and change requests with priority.
- Fix agreed issues and update documents.
- Get final approval and move to deployment and handover.
